

# Integrating Data on Macrovascular and Microvascular Outcomes into Diabetes Management: Evolving Treatment Strategies

## Final Outcomes Report

April 5, 2018

Boehringer Ingelheim-Lilly USA Grant ID: ME 201621692

# Executive Summary

Participants demonstrated significant improvement in:

- ❖ Recognition of the role of the kidney in glucose metabolism
- ❖ Awareness of the efficacy of SGLT-2 therapy
- ❖ Understanding of current data on the renal and vascular impact of diabetes treatments
- ❖ Ability to incorporate treatment decisions to minimize hypoglycemia
- ❖ Intent to modify antidiabetic therapy based on risk for hypoglycemia after the program
- ❖ Their confidence (46% improvement) in their ability to select patients appropriate for treatment with SGLT-2 inhibitors.

## Pre to Post Test Results By Learning Objective

| # | Learning Objective (N = 2,707)  | Pre-Test | Post-Test | % Change        |
|---|---|----------|-----------|-----------------|
| 1 | Describe the role of the kidney in glucose metabolism in health and disease                                   | 18.77%   | 51.20%    | <b>172.78%*</b> |
| 2 | Review the physiologic effects and clinical efficacy of SGLT-2 therapy in various patient populations         | 60.74%   | 72.94%    | <b>20.09%*</b>  |
| 3 | Review emerging data on possible renal and macrovascular effects of evidence-based diabetes treatment options | 60.42%   | 74.71%    | <b>23.65%*</b>  |
| 4 | Integrate the impact of treatment decisions on postprandial hyperglycemia and risk of hypoglycemia            | 60.42%   | 74.71%    | <b>23.65%*</b>  |

\* Results are statistically significant  $p < .05$

## Curriculum Patient Impact

### Onsite and Simulcast Participant Performance

- ❖ Both Live meeting and Simulcast cohorts increased their Pre-Test scores and performed similarly by Post-Test on all domains
- ❖ There was no significant difference in the improvement each cohort achieved demonstrating the equality of the impact that each delivery modality

### 4 Week Post-Activity Assessment

- ❖ 4 weeks after the live activity, participants reported the most significant improved abilities in their management of:
  - ❖ Pharmacotherapy
  - ❖ Disease state awareness
  - ❖ Patient education

### Persistent Educational Gaps

- ❖ Learners were challenged by treatment intensification as well as the role of the kidney in glucose reabsorption
- ❖ There is need for ongoing educational emphasis on SGLT2 inhibitor efficacy
- ❖ There is need for ongoing educational emphasis on role of the kidneys in glucose metabolism.

The findings reveal that this education has the potential to impact

**1,554,000**

patients on an annual basis.

In the CME evaluation, learners (N = 3,329) were asked to report how many patients with diabetes they see in any clinical setting per week by selecting a range. The resulting distribution of learner responses was then extrapolated to reflect the number of learners who have completed the content of the meetings.

# Curriculum Overview

- ❖ Accredited Live Regional Symposia
  - Launch Date: April 29, 2017 through January 20, 2018
  - The live symposium was held in 18 cities with national simulcasts from 6 cities.
  
- ❖ Interactive Enduring Activity
  - Launch Date: October 12, 2018 End Date: October 13, 2019
  - [http://naceonline.com/CME-Courses/course\\_info.php?course\\_id=923](http://naceonline.com/CME-Courses/course_info.php?course_id=923)
  
- ❖ Non-Accredited “Clinical Highlights”
  - Emailed to all participants within one week of each symposia
  - Reinforces content to participants
  - Contains clinical pearls to assist clinicians with the application of the education to practice

# Learning Objectives

1. Describe the role of the kidney in glucose metabolism in health and disease
2. Review the physiologic effects and clinical efficacy of SGLT-2 therapy in various patient populations
3. Review emerging data on possible renal and macrovascular effects of evidence-based diabetes treatment options
4. Integrate the impact of treatment decisions on postprandial hyperglycemia and risk of hypoglycemia

# Outcomes Assessment Methodology

## ACTIVITY PROTOCOL

- Data collection:
  - Paired **Pre- and Post-Test** questions
  - **Demographic** questions
  - Learner **Challenge** questions
- Employs **Knowledge, Competence, Confidence,** and **practice strategy** question types
- Appropriate statistics applied to assess change across learning domains

## CURRICULUM OUTCOMES PROTOCOL

- Assess Moore's Levels 1–5
- **Learning objective** analysis
- **Longitudinal** analysis following learner scores over monthly intervals (e.g., learning objectives, domains, repeated measure)
- Multi-dimensional **repeated-measure** (Level 5):
  - Prior to activity/after completion of each activity
  - Post-curriculum assessment survey

# Outcomes Assessment Methodology

## Activity Outcomes Protocol Measures Moore's Levels 1-4

### Learning Domain Question Types

- Knowledge
- Competence
- Confidence
- Practice Strategy

## Curriculum Outcomes Protocol Measures Moore's Levels 1-5

### RealIndex® Question

- Prior to activity
- Post activity
- Post Curriculum Assessment (PCA)

# Attendance and Engagement

| #            | Meeting/Simulcast Location (Date)  | Attendees    | Starts       | Content Completion |
|--------------|------------------------------------|--------------|--------------|--------------------|
| 1            | Miami Live Meeting (04/29)         | 190          | 176          | 86.36%             |
| 2            | Baltimore Live Meeting (05/06)     | 186          | 184          | 80.98%             |
| 3            | St. Louis Live Meeting (05/13)     | 114          | 97           | 93.81%             |
| 4            | Birmingham Live Meeting (05/20)    | 150          | 145          | 88.28%             |
| 5            | Birmingham Simulcast (S,05/20)     | 222          | 221          | 55.20%             |
| 6            | Atlanta Live Meeting (06/03)       | 240          | 211          | 93.84%             |
| 7            | Raleigh Live Meeting (06/10)       | 130          | 121          | 92.56%             |
| 8            | Raleigh Simulcast (S, 06/10)       | 322          | 175          | 56.00%             |
| 9            | Cleveland Live Meeting (06/17)     | 66           | 62           | 93.55%             |
| 10           | Tampa Live Meeting (06/24)         | 267          | 228          | 93.86%             |
| 11           | Anaheim Live Meeting (08/12)       | 175          | 151          | 84.77%             |
| 12           | Anaheim Simulcast (S, 08/12)       | 155          | 111          | 48.65%             |
| 13           | San Francisco Live Meeting (08/19) | 84           | 78           | 89.74%             |
| 14           | Troy Live Meeting (08/26)          | 244          | 192          | 89.06%             |
| 15           | Troy Simulcast (S, 08/26)          | 307          | 221          | 51.58%             |
| 16           | San Antonio Live Meeting (09/23)   | 105          | 97           | 90.72%             |
| 17           | Uniondale Live Meeting (10/17)     | 309          | 226          | 86.73%             |
| 18           | Nashville Live Meeting (10/14)     | 110          | 110          | 72.72%             |
| 19           | Nashville Simulcast (S, 10/14)     | 219          | 165          | 33.93%             |
| 20           | Houston Live Meeting (10/21)       | 132          | 132          | 71.97%             |
| 21           | San Diego Live Meeting (10/28)     | 112          | 112          | 75.89%             |
| 22           | San Diego Simulcast (S, 10/28)     | 379          | 234          | 51.74%             |
| <b>Total</b> |                                    | <b>4,335</b> | <b>3,634</b> | <b>76.03%</b>      |

Outcomes Metrics

# Learner Performance Summary

## Pre/Post Test Comparative Analysis Summary

| # Learning Objective (N = 2,707)  | Pre-Test | Post-Test | % Change        |
|---|----------|-----------|-----------------|
| 1 Describe the role of the kidney in glucose metabolism in health and disease                                   | 18.77%   | 51.20%    | <b>172.78%*</b> |
| 2 Review the physiologic effects and clinical efficacy of SGLT-2 therapy in various patient populations         | 60.74%   | 72.94%    | <b>20.09%*</b>  |
| 3 Review emerging data on possible renal and macrovascular effects of evidence-based diabetes treatment options | 60.42%   | 74.71%    | <b>23.65%*</b>  |
| 4 Integrate the impact of treatment decisions on postprandial hyperglycemia and risk of hypoglycemia            | 60.42%   | 74.71%    | <b>23.65%*</b>  |

| Domain (N = 2,707) | Pre-Test | Post-Test | % Change       |
|--------------------|----------|-----------|----------------|
| Knowledge          | 40.38%   | 59.83%    | <b>48.17%*</b> |
| Competence         | 69.58%   | 79.85%    | <b>14.76%*</b> |
| Confidence         | 2.43     | 3.54      | <b>45.68%*</b> |
| Practice Strategy  | 3.55     | 3.96      | <b>11.55%*</b> |
| RealIndex          | 59.46%   | 74.37%    | <b>25.08%*</b> |

## 4 Week Post Curriculum Assessment Summary

| # Learning Objective Follow-Up (N = 141)  | Pre-Test | PCA    | % Net-Change    |
|---|----------|--------|-----------------|
| 1 Describe the role of the kidney in glucose metabolism in health and disease                                   | 18.18%   | 50.91% | <b>180.03%*</b> |
| 2 Review the physiologic effects and clinical efficacy of SGLT-2 therapy in various patient populations         | 66.06%   | 77.06% | <b>16.65%</b>   |
| 3 Review emerging data on possible renal and macrovascular effects of evidence-based diabetes treatment options | 64.90%   | 69.32  | <b>6.81%*</b>   |
| 4 Integrate the impact of treatment decisions on postprandial hyperglycemia and risk of hypoglycemia            | 64.90%   | 69.32% | <b>6.81%*</b>   |

| Domain Follow-Up (N = 141) | Pre-Test | PCA    | % Net-Change   |
|----------------------------|----------|--------|----------------|
| Knowledge                  | 42.21%   | 61.89% | <b>46.62%*</b> |
| Competence                 | 77.06%   | 79.82% | <b>3.58%</b>   |
| Confidence                 | 2.34     | 2.93   | <b>25.21%*</b> |
| Practice Strategy          | 3.72     | 3.39   | <b>-8.87%*</b> |
| RealIndex                  | 63.10%   | 68.09% | <b>7.91%</b>   |

\* Results are statistically significant  $p < .05$

# Learning Objectives Analysis

| # | Learning Objective (N = 2,707)  | Pre-Test (SD)     | Post-Test (SD)    | % Change       | P Value |
|---|---|-------------------|-------------------|----------------|---------|
| 1 | Describe the role of the kidney in glucose metabolism in health and disease                                   | 18.77%<br>(39.06) | 51.205<br>(50.02) | <b>172.78%</b> | .000    |
| 2 | Review the physiologic effects and clinical efficacy of SGLT-2 therapy in various patient populations         | 60.74%<br>(48.85) | 72.94%<br>(44.44) | <b>20.09%</b>  | .000    |
| 3 | Review emerging data on possible renal and macrovascular effects of evidence-based diabetes treatment options | 60.42%<br>(26.57) | 74.71%<br>(24.83) | <b>23.65%</b>  | .000    |
| 4 | Integrate the impact of treatment decisions on postprandial hyperglycemia and risk of hypoglycemia            | 60.42%<br>(26.57) | 74.71%<br>(24.83) | <b>23.65%</b>  | .000    |

- ❖ Significant ( $p < .000$ ) and substantial gains, ranging from 20% to 173%, were measured for all items mapped to curriculum Learning Objectives (LOs). Varied performance remained at the conclusion of the curriculum with learners demonstrating: proficiency on LOs 2, 3 & 4, and ongoing challenge on LO1.
- ❖ The greatest gain was observed in LO 1 (197%), however learner's averages on items addressing the role of the kidney in glucose metabolism remained the lowest measured across the curriculum. This finding indicates that while learners improved, persistent gaps in this clinical area remain.
- ❖ Standard deviations (SDs) improved to lower levels on all curriculum metrics except LO1 where learner score variance remained elevated.

# Learning Domain Analysis

| Outcome Indicator (N = 2,707) | Pre-Test (SD)     | Post-Test (SD)    | % Change      | P Value |
|-------------------------------|-------------------|-------------------|---------------|---------|
| Knowledge                     | 40.38%<br>(37.53) | 59.83%<br>(38.49) | <b>48.17%</b> | < .05   |
| Competence                    | 69.58%<br>(46.02) | 79.85%<br>(40.12) | <b>14.76%</b> | < .05   |
| Confidence                    | 2.43<br>(1.17)    | 3.54<br>(.98)     | <b>45.68%</b> | < .05   |
| Practice                      | 3.55<br>(1.23)    | 3.96<br>(1.17)    | <b>11.55%</b> | < .05   |

- ❖ Statistically significant and substantial improvements were measured across the curriculum in all domains ( $p < .000$ ). Unlike Knowledge, where the Pre-Test average was low, learners demonstrated greater comparative proficiency in Competence across the curriculum.
- ❖ Increases in learners' self reported Confidence and Practice Strategy ratings reflect the efficacy of this education; however, relatively low Post-Test averages in Knowledge demonstrate that this population's perceived and demonstrated proficiency are aligned.
- ❖ Standard deviations (SDs), remained elevated at Post-Test in Knowledge and Competence.

# The RealIndex Question

*In order to help us assess your baseline knowledge of select topics that will be covered in this activity, please review the brief patient scenario and rate each of the statements as consistent with or inconsistent with your clinical approach.*

A 57-year-old obese man with a history of type 2 diabetes, hypertension, reduced renal function (eGFR 55 mL/min/1.73m<sup>2</sup>), and prior NSTEMI presents for a checkup. His A1C today is 8.1% and average FPG over last two weeks, ~130 mg/dL. Current medications include metformin 1000 mg bid, glipizide 10 mg qd, basal insulin 60 U qam, lisinopril 20 mg qd, atorvastatin 80 mg qd, metoprolol 100 mg bid, and aspirin 81 mg qd. After reviewing the brief scenario above, please rate each of the statements as consistent with or not consistent with best clinical practice:

## Consistent

- Discontinue sulfonylurea and add canagliflozin or empagliflozin
- If canagliflozin started, limit dose to 100 mg qd

## Not Consistent

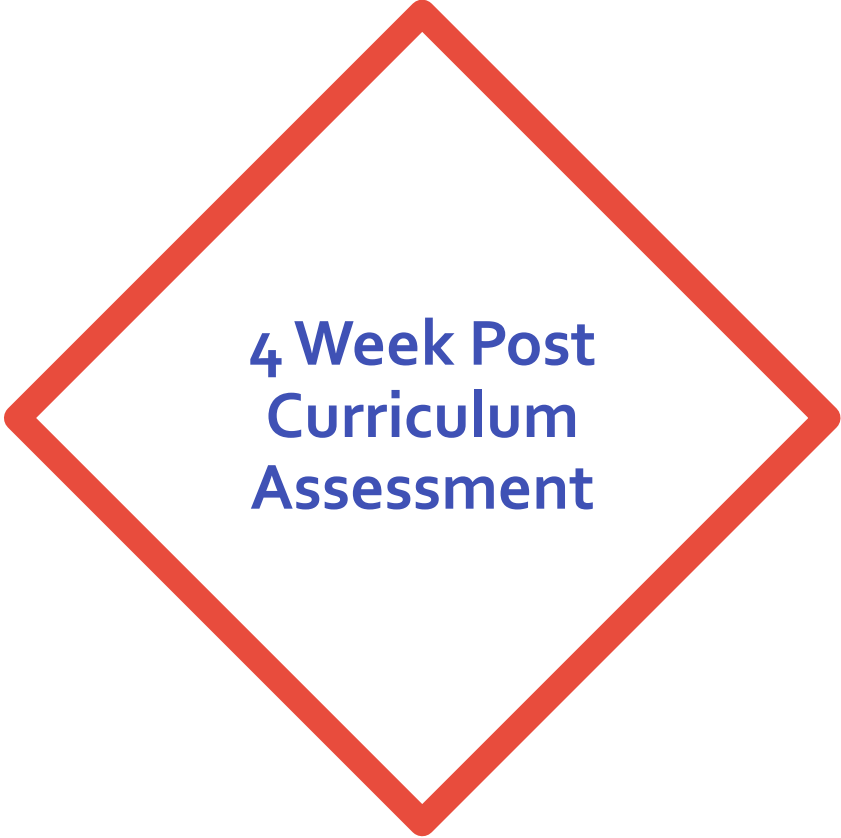

- Avoid all SGLT-2 inhibitors based on eGFR <60 mL/min/1.73m<sup>2</sup>
- Add prandial insulin tid and maintain current antidiabetic regimen
- Increase dose of basal insulin and add DPP-4 inhibitor

# Performance Change: RealIndex

| Curriculum Intervention |                |                |               | Intervention Effect |                     |                                |       |
|-------------------------|----------------|----------------|---------------|---------------------|---------------------|--------------------------------|-------|
| <i>N</i>                | Baseline (SD)  | Final (SD)     | % Change      | <i>P</i> - Value    | Average Effect Size | % Non-Overlap Baseline - Final | Power |
| 2,707                   | 59.46% (27.47) | 74.37% (25.74) | <b>25.08%</b> | < .05               | .559                | 36.19                          | 1.00  |

- ❖ Participants' average Performance score, based on the RealIndex, improved by 25% from baseline (59%) to final intervention (74%). This substantial improvement in learners' applied clinical proficiency met statistical significance ( $p < .000$ ) and exceeded the historical RealCME benchmark (5%).
- ❖ This curriculum had a medium effect ( $d = .559$ ) and achieved a high degree of power (1.00), reflected in the magnitude of impact on this population of learners: the 36% non-overlap between the RealIndex distributions measured at baseline and in learners final intervention.
- ❖ Standard deviations improved modestly from baseline indicating a moderate amount of score scatter affecting learners' final RealIndex average.

**4 Week Post  
Curriculum  
Assessment**

# Learning Objectives: Retention

| # | Learning Objective (N = 141)  | Pre-Test (SD)     | PCA (SD)          | % Change       | P Value |
|---|---|-------------------|-------------------|----------------|---------|
| 1 | Describe the role of the kidney in glucose metabolism in health and disease                                   | 18.18%<br>(38.75) | 50.91%<br>(50.22) | <b>180.03%</b> | < .05   |
| 2 | Review the physiologic effects and clinical efficacy of SGLT-2 therapy in various patient populations         | 66.06%<br>(47.57) | 77.06%<br>(42.24) | <b>16.65%</b>  | .057    |
| 3 | Review emerging data on possible renal and macrovascular effects of evidence-based diabetes treatment options | 64.90%<br>(23.05) | 69.32%<br>(23.93) | <b>6.81%</b>   | .090    |
| 4 | Integrate the impact of treatment decisions on postprandial hyperglycemia and risk of hypoglycemia            | 64.90%<br>(23.05) | 69.32%<br>(23.93) | <b>6.81%</b>   | .090    |

- ❖ Net gains, ranging from 7% to 180%, were measured for all items mapped to curriculum Learning Objectives (LOs).
- ❖ Varied performance remained at the conclusion of the curriculum with learners demonstrating: proficiency on LOs 2, 3 & 4, and ongoing challenge on LO1.
- ❖ The greatest gain was observed in LO 1 (180%), however learner's averages on items addressing the role of the kidney in glucose metabolism remained the lowest measured at follow-up. This finding indicates that while learners retained the majority of their improvement, gaps in this clinical area remain.

# Learning Domain Summary: Retention

| Outcome Indicator (N = 141) | Pre-Test (SD)     | PCA (SD)          | % Change      | P Value |
|-----------------------------|-------------------|-------------------|---------------|---------|
| Knowledge                   | 42.21%<br>(36.94) | 61.89%<br>(35.82) | <b>46.62%</b> | < .05   |
| Competence                  | 77.06%<br>(42.24) | 79.82%<br>(40.32) | <b>3.58%</b>  | .592    |

| ReallIndex                  | 63.10%<br>(24.15) | 68.09%<br>(23.39) | <b>7.91</b>   | .069    |

- ❖ Statistically significant and substantial net-improvements were measured at follow-up in Knowledge and Confidence.
- ❖ A 9% net decrease was observed in Practice Strategy and a non-significant 8% improvement from baseline was observed at follow-up.

Please select the specific areas of skills, or practice behaviors, you have improved regarding the treatment of patients with type 2 diabetes since this CME activity. (Select all that apply)

(4-week Post Assessment)

Sample Size: N = 475

# What specific barriers have you encountered that may have prevented you from successfully implementing strategies for patients with type 2 diabetes since this CME activity? (Select all that apply)

(4-week Post Assessment)

Sample Size: N = 475

**Analysis**

# Item and Statement-level Analyses

Item and statement-level analyses of all curriculum questions revealed ongoing areas of educational need:

- ❖ **Performance** Behavior related to treatment intensification.
  - ❖ On the RealIndex, learners were presented with a patient scenario and asked to sort the presented behaviors as consistent or not consistent with their current practice approach. Learners incorrectly endorsed (as “consistent” with their current practice approach):
    - Adding a prandial insulin while otherwise maintaining the patient’s current regimen, and
    - Increasing the dose of basal insulin and adding a DDP-4 inhibitor.
- ❖ **Knowledge** related to the role of SGLT-2 and GLUT-2. Specifically, 43% of learners underestimated the amount of glucose reabsorption by the kidney mediated by SGLT-2 and GLUT-2 transporters.
- ❖ Though gaps in two distinct clinical areas were observed, learners incorrectly endorsed the majority of “not consistent” RealIndex statements relating to treatment intensification.

# Summary of Outcomes Analysis: Levels 1-5

- ❖ Statistically significant and substantial improvements were measured across the curriculum in all learning domains. The improvements in Knowledge, Competence, and the RealIndex were notable and exceeded historical benchmarks for change established through RealCME meta-analyses.
- ❖ An evaluation of self-reported Confidence and Practice Strategy items revealed that, while ratings at Pre-Test were relatively low, robust improvements were achieved by the conclusion of the education.
  - This finding demonstrates that following participation, clinicians felt more able and empowered to make changes in their practice behavior.
  - This finding is reflected in learners' substantial (25%) improvement in Performance.
- ❖ This curriculum successfully engaged learners and improved their proficiency. However, persistent gaps remained at the conclusion of the education.
  - Learners were challenged by treatment intensification as well as the role of the kidney in glucose reabsorption
  - There is need for ongoing educational emphasis on SGLT2 inhibitor efficacy
  - There is need for ongoing educational emphasis on role of the kidneys in glucose metabolism.
